Neurons are cells that have the function of receiving and transmitting neural impulses whereas glial cells (astrocytes, microgliaocytes, ependymal cells and oligodendrocytes) are the cells that support, feed and insulate (electrically) the neurons.

The Nervous System - Biology Questions

The sympathetic will prepare the body for action or adrenaline rush and the parasympathetic nervous system restores equilibrium and conserves energy after a time of stress or action. the neuron structure and its organization into nerves the neuron structure goes cell body, dendrites and axon.

Nervous System Lesson 1.doc - Biology 30 Nervous System ...

Answer: The nervous system of human has two parts: Central Nervous System (CNS): It consists of the brain and the spinal cord. The brain lies protected inside the skull while the spinal cord is protected within the vertebral column. Peripheral Nervous System (PNS): It consists of nerves arising from the spinal cord (spinal nerves) and the brain (cranial nerves). These nerves link the central nervous system with the various body organs.
