Along the way, electrical gear on the boat will take power from the current flow in that circuit and use it to show us electronic charts, pump the bilge, and perform all sorts of other chores for us. As for the term power, it's best described as "the rate of doing work or expending energy," and it's measured in watts. Almost every piece of electrical equipment we use on a boat will have a label (or a manual) that tells us its demand for amperage, its output in watts, or both.
