Research. One of our main objectives has always been 'to promote and fund research into the causes, nature and care of psoriasis and to publish and disseminate the results of that research'. Since we were founded in 1968, we have awarded millions of pounds in research grants and PhD Studentships thanks to the fundraising efforts of individual members, branches, legacies and private donations.

Research - Psoriasis Association

PhD Studentships support the next generation of psoriasis researchers, and usually last for three years. Click on the expandable boxes to read more about the PhD Studentships that have been awarded funding.

The vision of the PSORT consortium is to better understand the determinants of response of psoriasis to biologic therapies. By collaboration with our partners from industry we will develop a clinical test to predict response and thereby rationalise and optimise patient care in a cost-effective manner.

Psoriasis - Treatment - NHS

Psoriasis is a skin condition that causes red, flaky, crusty patches of skin covered with silvery scales. These patches normally appear on your elbows, knees, scalp and lower back, but can appear anywhere on your body. Most people are only affected with small patches. In some cases, the patches can be itchy or sore.

Psoriasis is a long-lasting, noncontagious autoimmune disease characterized by raised areas of abnormal skin. These areas are typically red, or purple on some people with darker skin, dry, itchy, and scaly. Psoriasis varies in severity from small, localized patches to complete body coverage. Injury to the skin can trigger psoriatic skin changes at that spot, which is known as the Koebner ...

Psoriasis - Wikipedia

Psoriasis is a skin disorder that causes skin cells to multiply up to 10 times faster than normal, according to webmd. 'This makes the skin build up into bumpy red patches covered with white scales.
